EURAM

17-20 June, 2015 / Warsaw

Uncertainty is a great opportunity
Uncertainty is a great opportunity

Contemporary management theory and practice do not adequately address the phenomenon of uncertainty, which has come to characterise our daily lives.

The dominant stream of thoughts tells us to safeguard against uncertainty, although, on both theoretical and practical grounds we should ask if that is possible. Uncertainty is seen as an unpredictable force that can jeopardise our organising efforts. Uncertainty is supposed to leave us in the dark and not knowing what to expect and when. Moreover, the uncertainty that we are living in today is not limited to financial markets, economic and socio-political macro environments. In the age of hyper connectivity the uncertainty we are facing is evident in virtually all areas of the organisational life.

The EURAM 2015 conference will explore this concept in an opportunity-seeking framework. Uncertainty can be both a threat and an opportunity for organisations. The positive response to the challenge of opportunity is the most constructive stand that we can take, and one that also may equip us best to deal with further challenges that the future may bring.

We will endeavour to respond to the following questions: How and in which ways do the drivers of uncertainty change? What resources do organisations need to develop in order to capture the changes that uncertainty may bring? Which organisational forms and configurations respond better to the challenges of uncertainty? What concept of leadership is most suited to steer organisations through the waves of unexpected and unpredictable storms? How can we better educate people to make them more competent individuals who are confident with uncertainty? How should organisations manage their boundaries in order to be able to absorb changes that uncertainty causes? Are the concepts that we already seem to know well such as innovation, knowledge, intellectual capital, leadership, responsibility, sustainability, diversity assuming new meanings at the time of uncertainty?

Warsaw is the ideal venue for such debates. It is located geographically, culturally and intellectually on the crossroads between East and West, North and South. The tormented history of Central and Eastern Europe, and Poland in particular, provides the most persuasive lessons of transition and of coping with uncertainty. These lessons are encrypted in people’s minds, in management practices, and in the body of research. When confronted with Western management, such a “genius loci” is capable of producing synergistic effects that we, as our community of engaged scholars, are looking for.
Welcome to Warsaw
The capital of Poland
Warsaw is a city with a unique combination of modern urban development and historical architecture. Palaces, churches and architectural clusters are interwoven with the wide open spaces of squares, parks and city gardens.

The Royal Baths (Łazienki Królewskie), a residence of King Stanislaw August Poniatowski, is one of the most beautiful 18th-century park-and-palace complexes in Europe. As Warsaw’s famous landmark, it attracts visitors with its classicist architecture and the soothing greenery of the park. In summertime, a lot of attractions are offered, such as concerts amidst a sea of flowers in front of Fryderyk (Frédéric) Chopin’s monument.

Kozminski University
Kozminski University, founded in 1993, is a non-public institution of higher education with full academic rights. The university has obtained Polish and international accreditations, as well as excellent results in global and national educational rankings which shows the high quality of its programmes and services. The university’s offer includes various bachelor, master, MBA as well as Ph.D. programmes. All of these are also offered in English.

Poland in brief
Poland is situated in the central part of the European continent, the geometrical centre of which is near Warsaw. Poland’s total surface area is 322,500 sq km (312,600 sq km of land, 1,200 sq km of inland waters, and 8,700 sq km of territorial waters). This makes it the 9th largest country in Europe.

In 2013 Poland’s population stood near 38,496,000. This figure makes it the 33rd most populated country in the world and the 9th in Europe. Poland has areas of outstanding natural value; there are still places hardly touched by civilisation, such as the wild and desolate Bieszczady Mountains with their spectacular pastures known as Poloniny, and the inaccessible flood plains along the Biebrza River, home to many rare bird species that cannot be found elsewhere in Europe.

Białowieża National Park is the only Polish nature site on the UNESCO list. Białowieża Forest is the last remaining natural forest ecosystem in Europe, with an abundance of flora and fauna unmatched anywhere else. The Forest is inhabited by wolves, lynx, otters, and the biggest European mammals – European Bisons. The average age of trees in the Forest is 126 years.

All information about Poland and Warsaw are available from the websites: www.en.poland.gov.pl, www.um.warszawa.pl
